## **5α-Dihydrotestosterone-d3**

http://hk.lumiprobe.com/p/5alfa-dihydrotestosterone-d3

 $5\alpha$ -dihydrotestosterone-d3 (16,16,17-d3) contains a stable deuterium label and is suitable for use as an internal standard for determining the concentration of this hormone in biological samples by chromatographic methods with tandem mass spectrometry (MS/MS).

In the body,  $5\alpha$ -dihydrotestosterone (DHT) has pronounced androgenic activity; its affinity for androgen receptors is higher than that of testosterone. The conversion of testosterone to  $5\alpha$ -DHT is catalyzed by  $5\alpha$ -reductase (5AR).  $5\alpha$ -DHT is an important biological marker in the detection of many diseases.
