

BDP®-aminoacetaldehyde diethyl acetal (BAAA-DA)

<http://hk.lumiprobe.com/p/baaa-da-247069-93-8>

BDP®-aminoacetaldehyde diethyl acetal (BAAA-DA) is a stable precursor to BDP-aminoacetaldehyde (BAAA), a cell-permeant fluorescent substrate for aldehyde dehydrogenase (ALDH). Inside the cell, BAAA is converted by intracellular ALDH to BDP-aminoacetate (BAA), which accumulates in cells and can serve as an indicator of high ALDH activity.

BAAA-DA can be used for identifying, isolating, and sorting cells with high levels of ALDH, such as human hematopoietic progenitor cells and cancer stem cells.

BAA has an excitation maximum of 503 nm and an emission maximum of 509 nm.
