

Eva488 solution for qPCR, 20x

<http://hk.lumiprobe.com/p/eva488-eva-green>

Eva488 is a real-time PCR dye that does not inhibit the reaction and exhibits a high fluorescence signal increase. This is an analogue of Eva Green, a dimeric acridine that emits fluorescence when bound to double-stranded DNA.

Fluorescence of Eva488 dye is detected in the fluorescein channel.

Delivered as 20x solution in water.

分子量: 1119.06

分子式: $C_{50}H_{68}N_8F_{12}O_3P_2$
