

Eva488 solution, 20×

<http://hk.lumiprobe.com/p/eva488-eva-green>

Eva488 is a dye that does not inhibit the reaction and exhibits a high fluorescence signal increase. This is an analogue of EvaGreen®, a dimeric acridine that emits fluorescence when bound to double-stranded DNA.

Fluorescence of Eva488 dye is detected in the fluorescein channel.

Delivered as 20× solution in water.

分子量: 1119.06

分子式: C₅₀H₆₈N₈F₁₂O₃P₂
