## **HPG (L-Homopropargylglycine)**

http://hk.lumiprobe.com/p/l-homopropargylglycine-hpg

L-Homopropargylglycine (HPG) is a noncanonical amino acid analog of methionine that contains a terminal alkyne moiety. HPG-labeling is a fast, sensitive, non-toxic, and non-radioactive alternative to the traditional technique for detecting nascent protein synthesis.

HPG is the cell-permeable compound randomly incorporated into synthesizing protein instead of methionine during translation. The resulting alkyne-labeled full-length proteins can be detected via copper-catalyzed click reaction with fluorescent or biotin-labeled azides and used for subsequent microscopic imaging or purification tasks.
