## LumiTracker® Mito Green FM

http://hk.lumiprobe.com/p/mitotracker-green-fm

LumiTracker Mito Green FM is a cationic green-fluorescent dye that stains mitochondria in live cells. The dye passively diffuses across the plasma membrane and selectively accumulates in active mitochondria based on their membrane potential; therefore, it is often used to assess cells' health and as a dye for mitochondrial localization.

The fluorescence of LumiTracker Mito Green FM disappears after fixation with aldehydes, so this dye is only suitable for working with living cells.
