## QuDye® Protein Quantification Reagent, 200×

http://hk.lumiprobe.com/p/protein-assay-reagent-200x

QuDye® Protein Quantification Reagent is designed for quantification of protein concentration by a fluorometer in the range of initial protein concentration from 12.5 to 5000  $\mu$ g/mL. The reagent can be used for quantification of protein concentration with both fluorescence microplate readers and cuvette-based fluorometers, whose measurement range can be wider, depending on the characteristics of the device. Because the reagent selectively binds to SDS-protein micelles, the presence of nucleotides, DNA, RNA, amino acids, salts, reducing agents (2-mercaptoethanol, DTT), and other impurities (except detergents) in the sample does not affect the result of measurement. QuDye® Protein Quantification Reagent is quite versatile and allows quantification of the concentration of various proteins with high sensitivity.

This product is a component of <u>QuDye Protein Quantification Kit</u> and is used as an OEM component of kits by other manufacturers.
