

Ribo488 RNA Quantification Reagent

<http://hk.lumiprobe.com/p/ribo488-quantification>

Ribo488 RNA Quantification Reagent is an ultra-sensitive dye. It enables the detection of the RNA/dye complex fluorescence with high selectivity and in a wide range of RNA concentrations with a linear dependence. Ribo488 RNA dye exhibits bright green fluorescence when binding to nucleic acids, with excitation/emission peaks at 500 and 525 nm, respectively.

Fluorescence staining of RNA with Ribo488 can be used in applications that require RNA preparation for microarray samples, real-time reverse transcription PCR (RT-PCR) assays, differential display PCR, Northern blot, S1 nuclease assays, RNase protection assays, and to construct cDNA libraries.

Reagent is supplied as 400 μ M solution of dye in anhydrous dimethylsulfoxide (DMSO).

The DMSO stock solution should be stored at -20°C . The working solution of the Ribo488 RNA Quantification Reagent must be protected from light, and be used within a few hours of its preparation.
