

## Ribo488 RNA Quantification Reagent

<http://hk.lumiprobe.com/p/ribo488-quantification>

Ribo488 RNA Quantification Reagent enables the detection of the RNA/dye complex fluorescence in a wide range of RNA concentrations with a linear dependence. Ribo488 RNA dye exhibits bright green fluorescence when binding to nucleic acids, with excitation/emission peaks at 500 and 525 nm, respectively.

Fluorescence staining of RNA with Ribo488 can be used in applications that require RNA preparation for microarray samples, real-time reverse transcription PCR (RT-PCR) assays, differential display PCR, Northern blot, S1 nuclease assays, RNase protection assays, and to construct cDNA libraries.

Reagent is supplied as 400  $\mu$ M solution of dye in anhydrous dimethylsulfoxide (DMSO).

The DMSO stock solution should be stored at  $-20$  °C. The working solution of the Ribo488 RNA Quantification Reagent must be protected from light, and be used within a few hours of its preparation.

This product is a component of [Ribo488 RNA BR Fluorimetric Assay Kit](#) and [Ribo488 RNA Plate Reader Assay](#).
