

TBTA ligand

<http://hk.lumiprobe.com/p/tbta-ligand>

TBTA (Tris(benzyltriazolylmethyl)amine) is a tertiary amine with three 1,2,3-triazole groups. It is one of the most widely used water-insoluble ligands for copper-catalyzed azide-alkyne cycloadditions (CuAAC). TBTA complexes with copper(I) and promotes click reaction catalysis through the stabilization of the copper(I)-oxidation state.
